

## Gloves made with Kevlar® protect our hands from hazards in subway maintenance.

**“DuPont brand is trustworthy and the glove is reliable and comfortable.”**

**Jing Fang**, Nanning Rail Transit Co. Ltd., Deputy Minister of Safety Supervision

### Synopsis

- Subway operation requires regular maintenance of equipment and facilities.
- **The fact that there have been no injuries since we choose gloves made with Kevlar®, shows that we made the right choice!**

### Challenges

As the safety supervisor, I get to manage different operating positions. In my experience, subway operation requires regular maintenance of equipment and facilities for optimum functioning. It is a high-risk job that needs the best and most reliable personal protective equipment to keep the workforce safe from hazards.

### Solutions

As an organization, we are aligned with what our workforce requires to keep themselves safe and to continue working productively without any worries.

In one of our internal surveys, we realized that the PPE that was being used at that time was not providing adequate protection. It was the demand department that originally requested that they need gloves made with Kevlar® to better protect themselves!

We listened to their proposal and ordered our first set of gloves made with Kevlar® – much to our satisfaction! We had always heard about the trustworthiness of the DuPont brand. This time we experienced it ourselves, and we were highly impressed. Gloves made with Kevlar® are comfortable to wear and can protect our hands from being cut during subway maintenance.

The glove offers reliable protection and outstanding comfort. The greatest testimony to that statement is the fact that there have been zero injuries since we started using gloves made with Kevlar®! It just proves that we made the right choice!
